- Bootstrap
- Context API
- Redux Toolkit
- Git / Github
- API Integration
- TypeScript
- Django
- DRF
- MongoDB
- Postman
- MYSQL Basics
- OOP
- DSA
- Problem Solving
- Vercel
- Netlify

WORK EXPERIENCE

Full Stack Internship | TMR Consulting Private Limited   *DEC 2023 - MAR 2023*

- During my 3-month internship at TMR Consulting as a Full stack intern, I successfully contributed to two key projects. I developed a fully responsive web application using React.js and Tailwind CSS, ensuring optimal user experience across devices. Additionally, I enhanced an e-commerce platform by integrating Redux Toolkit for state management and API integration.

Full Stack Developer | TMR Consulting Private Limited   *APR 2024 - PRESENT*

- I have been working for over a year as a Full Stack Web Developer specializing in React, Next.js, and Django. During this time, I have successfully led the development of three major projects: HR Management, Payroll, and Attendance Management. I take full ownership of these projects, focusing on delivering seamless functionality, efficient performance, smooth API integration, and an outstanding user experience. My expertise has been instrumental in building robust and scalable solutions for these platforms, ensuring their success and reliability.

Full Stack Developer | Freelancing *2023 - PRESENT*

- I have over 2 years of experience working on self-driven projects, independently managing web development tasks and delivering high-quality, responsive applications. This has allowed me to refine my skills in the Full stack across various industries.

PROJECTS

Portfolio Website

Role: Frontend developer (Next js)

Description: I developed and managed a responsive portfolio website using Next.js, emphasizing seamless functionality and performance optimization. The site effectively showcases all professional projects in detail, providing an engaging and polished user experience.

Advertisement Web App (Simplif)

Role: Full Stack Web Developer

Description: I managed both the frontend and backend of a client project using React, TypeScript, and Tailwind CSS for a responsive and dynamic user interface. On the backend, I utilized Django with PostgreSQL to ensure robust data management and seamless functionality.

Link: simlif.org.

Car Hub

Role: Frontend developer (Next js)

Description: I developed a Car Listing Application using Next.js, Tailwind CSS, and TypeScript. This application allows users to quickly and easily find, book, or rent a car. It features API integration for filtering cars by type, model, and other criteria, providing a seamless user experience for car rental and booking needs.

HR Management

Role: Full Stack

Description: I developed an HR Management System using React, Django, and Material-UI, streamlining processes like onboarding, leave management, and performance tracking. The platform features a user-friendly interface with role-based access control and real-time data updates. It ensures seamless functionality and efficiency for HR teams with robust backend logic and API integrations.

Link: not deployed they was using locally.

Payroll Management

Role: Full Stack

Description: I developed a Payroll Management System as a Full Stack Developer using React, Django, and Material-UI (MUI). This system automates payroll processes, including salary calculations, tax deductions, and employee pay slip generation. The frontend, styled with MUI, offers an intuitive and visually appealing user interface, enhancing the user experience. It features dynamic pay code management, integration with attendance systems, and multi-tier approval workflows. The solution ensures accuracy, compliance, and efficiency in handling complex payroll operations, providing a scalable and reliable platform for organizations.

Attendance and Leave Management System

Role: Frontend developer (Next js)

Description: I developed an Attendance and Leave Management System using Next.js and Tailwind CSS, enabling real-time attendance tracking and leave management. The platform features an intuitive interface for employees to mark attendance, apply for leave, and view balances. Administrators can efficiently manage requests, schedules, and reports, enhancing workforce management.

Link: not deployed they was using locally.

Provably Fair System

Role: Frontend developer (Next js | Tailwind CSS)

Description: I developed a Provably Fair System using React and Tailwind CSS, ensuring transparency and fairness in random outcomes. The platform features a sleek interface, allowing users to verify results using cryptographic hash functions. It emphasizes trust and reliability with an intuitive real-time verification experience.

Link: not deployed they was using locally.

Groco (fresh and organic products for your)

Role: Frontend developer (React js | Tailwind CSS)

Description: I developed a Fresh and Organic Products Website using React and Tailwind CSS, promoting health and sustainability. The platform features a visually appealing design, allowing users to explore products and place orders effortlessly. It emphasizes simplicity and accessibility, providing a seamless and trustworthy user experience.

Best Food In Pakistan

Role: Frontend developer (React js | Material-UI)

Description: I developed a Food Website using React and Material-UI, showcasing the best food options in Pakistan. The platform features a vibrant, modern design, enabling users to browse dishes and order easily. It highlights Pakistan's rich culinary culture with a seamless and engaging user experience.

Travel Planner

Role: Frontend developer

Description: I developed and managed a Travel Planner website using simple HTML and CSS, allowing users to search for countries and confirm ticket bookings. The platform features a user-friendly interface for easy navigation. It offers a seamless experience for travelers to plan and confirm their trips.
